An Introduction to Differentiable Manifolds and Riemannian ...

A differentiable manifold (of class C^k) consists of a pair (M, \mathcal{O}_M) where M is a second countable Hausdorff space, and \mathcal{O}_M is a sheaf of local \mathbb{R} -algebras defined on M , such that the locally ringed space (M, \mathcal{O}_M) is locally isomorphic to $(\mathbb{R}^n, \mathcal{O})$. In this way, differentiable manifolds can be thought of as schemes modelled on \mathbb{R}^n .

Introduction to Differentiable Manifolds | Serge Lang ...

The first six chapters define and illustrate differentiable manifolds, and the final four chapters investigate the roles of differential structures in a variety of situations. Starting with an introduction to differentiable manifolds and their tangent spaces, the text examines Euclidean spaces, their submanifolds, and abstract manifolds.

An Introduction to Differential Manifolds

A manifold is a Hausdorff topological space with some neighborhood of a point that looks like an open set in a Euclidean space. The concept of Euclidean space to a topological space is extended via suitable choice of coordinates. Manifolds are important objects in mathematics, physics and control theory, because they allow more complicated structures to be expressed and understood in terms of ...
