So taking a page from Lee Trampleasure's blog "Bouncing Ball Lab Introduces Models and Foreshadows Future Physics Concepts," I tried a new version of the Bouncing Ball Lab with my Regents Physics students on the 3rd day of school. Our goal was to introduce our general physics philosophy, start using the metric system, review graphing procedures, slope, y-intercept, equation of a line, and ...

Lab #6 – Energy of a Bouncing Ball GOALS In this lab you will learn:

• How to use the momentum principle to solve for the initial velocity of a bouncing golf ball.

• How to use the initial velocity of a bouncing golf ball and the energy principle to predict the maximum height of the ball, which you will compare with the height you measure.

Step 1: Put two balls in the freezer. We got the best results after they had been in the freezer about an hour. Leaving them in longer than an hour did not seem to change the results. Step 2: Draw a drop line on the poster board. It doesn't matter what height you drop the ball from, it's the same each time.

Collisions and Momentum: Bouncing Balls. This lesson introduces the concepts of momentum, elastic and inelastic collisions. Many sports games, such as baseball and ping-pong, illustrate the ideas of momentum and collisions. Students explore these concepts by bouncing a ball on different surfaces and calculating the momentum for...
