About this book. In the pharmaceutical industry, the incorporation of the disciplines of pharmacokinetics, pharmacodynamics, and drug metabolism (PK/PD/DM) into various drug development processes has been recognized to be extremely important for appropriate compound selection and optimization. During discovery phases, the identification of the critical PK/PD/DM issues of new compounds plays an essential role in understanding their pharmacological profiles and structure-activity

pharmacokinetics and pharmacodynamics is essential for the development of rational pharmacotherapeutics because pharmacodynamics and pharmacokinetics are able to determine the drug concentration required to produce the desired therapeutic effect and the drug dose regimen required to achieve the targeted drug concentration, respectively, by using various models.
