Geometry (from the Ancient Greek: ??????????: geo-"earth", -metron "measurement") is a branch of mathematics concerned with questions of shape, size, relative position of figures, and the properties of space. A mathematician who works in the field of geometry is called a geometer.. Geometry arose independently in a number of early cultures as a practical way for dealing with lengths ...

I previously described how to use Mahalanobis distance to find outliers in multivariate data. This article takes a closer look at Mahalanobis distance. A subsequent article will describe how you can compute Mahalanobis distance. Distance in standard units In statistics, we sometimes measure "nearness" or "farness" in terms of the

Algebraic geometry - Wikipedia

Two statistical methods for investigating relationships between data samples are bivariate analysis and multivariate analysis. Bivariate analysis looks at whether a relationship exists between two paired data sets. Multivariate analysis looks at whether two or more variables are correlated.
